SKILLS React, Rails, JavaScript, Ruby, jQuery, Redux, TDD, HTML5, CSS3, SQL, Git, AWS, PostgreSQL, SQLite3

PROJECTS

Kelp! (Ruby on Rails, JavaScript, React, Redux, CSS3, Webpack, PostgreSQL, AWS)

[Live Link](#) | [Git](#)

[Link](#)

Kelp! is a single page web application inspired by Yelp that has a SpongeBob SquarePants theme. Users can search businesses and leave reviews.

- Created working user authentication using BCrypt and an MVC application design model that enables created users to persist between sessions and differentiation between logged in and logged out state.
- Utilized AWS S3 buckets to house photo files which reduced the load on active storage and shortened load times
- Followed RESTful conventions and implemented core CRUD functionalities using rails backend routes in conjunction with JBuilder to allow users to create reviews which persist in the backend

FF-Statty (JavaScript, HTML5, CSS3, Webpack, D3.js)

[Live Link](#) | [Git Link](#)

FF-Statty is a data visualization project that shows a searched player's statistics and fantasy football points.

- Utilized D3 to represent a comparison of the Fantasy Football points of a searched player against the top scorer and average at each offensive position as a bar chart
- Aggregated external API data of varying formats from multiple sources into a cohesive custom JSON object optimized for parsability and easy retrieval of necessary data for user interface
- Compared the key values of a custom built JSON object to the user's input to implement a search bar with an autocomplete functionality
